

## **TECHNICAL DATA BULLETIN**

### **Burnishing Compound 690**

#### Description:

Burnishing Compound 690 is an alkaline liquid for burnishing and polishing stainless steel, steel, copper, and other metals. It is formulated with additives to aid in cleaning soiled parts, wetting to provide lubrication for the media/part interface and media/media interface, and rust prevention of ferrous parts as well as steel media. These properties improve efficiency and life of the media. Burnishing Compound 690 helps develop brilliant colors and a highly polished finish with any acceptable non-abrasive media.

#### Properties:

Appearance	straw, clear liquid
Odor	mild
Solubility	complete
Normal Working Temperature	ambient
Normal Working Concentrations	1% to 2% by volume

#### Application:

Due to liquid nature, Burnishing Compound 690 can be easily and accurately measured, and is ready for use upon dilution.

The organic rust inhibitors present provide good protection for ferrous parts in storage.

The surfactant system used provides a high level of emulsification and cleaning.

#### Packaging:

5 gallon pails  
55 gallon drums  
330 gallon tote tanks
